## PROFILE

Backend engineer and Tech Lead with 9 years of Java experience across banking and fintech. Hands-on Java and Spring Boot payment-provider integrations, contributions to on-premises to AWS modernization, and technical leadership from architecture review through production troubleshooting.

## EXPERIENCE

### Software Engineering Tech Lead

Cloud Payments | Jan 2025 - Present | EU / UK initiatives

Payment initiatives span multiple services and external partners. My role connects architecture review, integration boundaries and hands-on delivery.

- Align service ownership and implementation sequencing across concurrent initiatives, making dependencies explicit before development starts.
- Review failure handling and data consistency with engineers, translating architecture decisions into implementation constraints.
- Work through technical escalations with engineers and external partners, feeding implementation findings back into the design.

### Java Developer

Cloud Payments | Jul 2022 - Dec 2024 | United States

A fintech platform needed Java APIs connecting banking, crypto and card providers across financial workflows.

- Implemented integrations with Circle, Fireblocks and Ibanera using Java and Spring Boot.
- Worked with architects and engineers on external-service failure paths and error handling.
- Supported releases through automated tests, code review and CI/CD in Kubernetes environments.

### Java Spring Developer

PROFIT Business Bank | Mar 2022 - Jun 2022 | United States

Business-banking customers needed cash flow statements and financial reporting workflows.

- Built backend services supporting cash flow statements and business-customer reporting.
- Implemented REST APIs and asynchronous processing for financial reporting, with attention to data consistency.

### Software Engineer

Itau Unibanco | Feb 2019 - Dec 2021 | Brazil

Risk and regulatory workflows depended on established banking systems while services moved toward AWS.

- Developed backend services and REST APIs for risk and regulatory workflows.
- Contributed to on-premises to AWS modernization and supported cloud and on-premises CI/CD pipelines.
- Worked with Kafka, AWS messaging and SQL in financial reporting systems requiring traceable, controlled changes.

### Intern

Itau Unibanco | Jul 2017 - Jan 2019 | Brazil

Risk teams needed metrics and regulatory reporting required by the Brazilian Central Bank.

- Helped build the C# system supporting those risk metrics.
- Optimized SQL queries, procedures and functions, and built internal Visual Basic automations.

## TECHNICAL SKILLS

**Backend & data:** Java 8-21, Spring Boot, REST APIs, PostgreSQL, Oracle / PL/SQL, Liquibase, Maven

**Distributed systems:** Kafka, AWS SQS / SNS, Idempotency, Webhooks, Outbox pattern, Reconciliation, Fault tolerance

**Cloud & delivery:** AWS, EKS / ECR, IAM, CloudFormation, CodePipeline, Docker, Kubernetes, Jenkins

**Engineering quality:** JUnit, Mockito, Spring Test, Integration testing, Observability, Code review, Migration planning

**Technical leadership:** System design, Architecture reviews, Service ownership, Mentoring, Delivery planning, Cross-functional collaboration

## INDEPENDENT ENGINEERING PROJECT

### Payment orchestration - Java / Spring Boot / PostgreSQL

Local Docker demonstration with durable request idempotency, a provider stub, outbox/inbox and PostgreSQL concurrency tests. Independently built with fictional payments; no employer code or real payment processing.

## EDUCATION

Diploma in Business Administration | University of Victoria | Jan 2022 - Apr 2024

BSc Computer Science | Mackenzie Presbyterian University | Jan 2015 - Dec 2018

## LANGUAGES

Portuguese (native) | English | French (currently studying)
